

GENERAL APPLICATION

1 Wash hands

Remove any excess oil.

2 Clean your device

Use the included microfiber towelette.

3 Protect from moisture

Power off device and remove battery if possible. Protect from moisture by covering major openings with supplied strips/dots where applicable. Avoid spraying solution directly into any openings during install.

4 Moisten hands with mister

Mist hands before touching adhesive side of film.

5 Prepare film

Evenly mist adhesive side of film while peeling back.

Mist the adhesive side of the film. 8-10 pumps from the mister held about 8 inches away should suffice.

saturated but not dripping

6 Align film

Place film adhesive side down. Align two adjacent corners first. Avoid getting fingerprints on the adhesive side of the film or the device.

adhesive side down

7 Push out water & bubbles

Use squeegee on flat surfaces. Always push moisture from center to outside. If bubbles can't be squeegeed out, remove film, and start over from step #5.

tip: moisten squeegee prior to this step

8 Apply other film with these techniques (if applicable)

Cornering, stretch & tack

Hold film down as you go around corners.

Alignment over holes

Carefully align pre-cut holes in film over the holes on your device.

do not overstretch film or misalignment may occur

Prepare narrow strips

A: First wet thumb and index fingers with mister.

B: Slide film between wet fingers to moisten both sides.

wet fingers

pull upward

Applying narrow strips

Once wider film is secure, apply no pressure to narrow film.

Lifting edges

Use a hair dryer, on "high heat", and hold ½" from device. Run heat over lifting areas for 10-20 seconds and use microfiber towelette to push and hold edges in place until they bond. Repeat process if necessary.

10 - 20 seconds

9 Use hands to finish

Use palms to push any remaining water out working from the center out. Use fingers to finish and hold down edges to bond. Apply pressure to the edges for 30 - 60 seconds or longer until the film bonds to the device.

use palms to finish

30 - 60 seconds

use fingers to finish

Use the microfiber towelette to dry any excess moisture.

10 Finish up

Leave device powered off for 1 hour, allowing any moisture to evaporate. Remove protective strips/dots, where included, and re-install battery to power up. Minor bubbles and haziness will be visible on the device for 24 hours before evaporating completely.

ready for use!

SPECIFIC DEVICE APPLICATION

Your films may come with specific point-by-point application tips matched to your device. Use these instructions for more details on applying film to your device.
